CERAMIC TILES

The product may be susceptible to scratching in handling and installation, as well as use. Expect variation of color run from production to production.

Cutting

Cut tiles with a wet saw using a diamond blade. Cut tiles slowly using multiple passes, increasing the depth with each pass.

Grouting

Apply a premium grade thin-set mortar using a 4 mm V-notch trowel for small tiles or 6 mm Square-notch towel for large tiles.

Set tiles, apply pressure or tap the surfaces with a rubber grout float to ensure all tiles are bonded and aligned properly. Use a level periodically to check the grout joints.

Mix and apply grout. For tiles with a metallic glaze finish use unsanded grout to prevent surface abrasion.

Clean all excess grout immediately with a damp sponge.

After 12 hours polish any remaining grout haze with a clean dry cloth.

Cleaning and maintenance

Do not use abrasive cleaners or harsh chemicals. Use all-purpose cleaner recommended and safe for use on your tiles.

Usage

Ceramic tiles are recommended for interior walls. They can be installed on shower walls. Not suitable for floors.

Product inspection and claims

Being an artistic production, there may be a few minor defects or variations in intensity, composition, tone and brightness of the color. It is recommended to inspect all the material in the sunlight before the installation.
